Summary

Detail-oriented Computer Science undergraduate with skills in Python, SQL, and Data Science. Interested in data analysis, machine learning, and database management to derive actionable insights from data. Seeking opportunities to apply technical and analytical skills in building scalable data solutions and contributing to impactful projects in a collaborative environment.

Skills

Programming & Querying: C, C++, Python, Java

Data Visualization & Databases Tools: MS Excel, Power BI, SQLite, MySQL

Web Development: HTML, CSS, JavaScript, Node.js

Cloud & DevOps: AWS, Oracle cloud, Docker, GitHub

Other Skills: Problem-solving, Team collaboration, Time management, Quick learner

Projects

AI Text Humanizer & SaaS API Platform | *Python, Flask, SQLite, JavaScript, NLTK* **February 2026 – Present**

- Engineered an advanced NLP text-transformation engine using NLTK WordNet and multi-hop language translation to restructure AI-generated text and bypass automated detection models.
- Implemented tone-specific "Grammatical Shatter" pipelines and engineered cryptographic evasion techniques, including zero-width character injection and Unicode spoofing.
- Flourish a complete SaaS backend featuring user authentication, secure OTP password resets via SMTP.

AI Video Generator | *Python, Flask, Gemini API, MoviePy, Docker*

June 2025 – December 2025

- Using Python and Flask, we designed a fully automated video output line open of compositing from a single script.
- Merged Google Gemini 2.0 API for dynamically creating structured, naturalistic sound scripts and Pexels API for creation. Programmatically meaning over 15+ in-context HD TV for each generation.
- Architected a backend rendering engine utilizing MoviePy and FFmpeg to automatically stitch media, apply Text-to-Speech (TTS) audio overlays, and synchronize clip durations.

Research Papers

Multi-Temporal Land Use Land Cover Classification | *GEE IDE(JavaScript)*

October 2025 – January 2025

- Evolved an end-to-end multi-temporal LULC analysis system covering 8 time periods using 3 satellite missions.
- Processed and harmonized 30+ years of satellite imagery at 30 m spatial resolution, generating 8 classified LULC maps.
- Design of 6 spectral indices to improve class. Classified 6 land cover classes using hundreds of labeled training samples.

ESP32 NAS & Web File Server | *C/C++ (Arduino core), HTML/CSS/JavaScript,*

January 2024 – August 2024

- Added a role-based access control with 3 user roles (Admin, User, Viewer) and per-role permissions for upload, delete, system view, and admin console access.
- Develop a file server on ESP32 running in WiFi AP mode with an HTTP server with ban/unban for suspicious IPs.
- Created an Admin Console to view up to 100 recent log entries (timestamp, IP, user, action) and connected clients.

Awards & Certifications

- **Smart Manufacturing & Industry 4.0 - IITD–AIA Foundation (Feb 2024):** Completed a 3-day training programme on Industry 4.0, IIoT, automation, and smart factory concepts.
- **Python for Data Science – NPTEL (Elite + Silver):** Scored 76%, ranking in the top performance bracket, with hands-on coursework in Python programming, data analysis, NumPy, Pandas, and data visualization
- **The Joy of Computing Using Python – NPTEL (Elite):** Achieved 72%, demonstrating strong proficiency in problem-solving, algorithmic thinking, and Python-based computational concepts.

Education

B.Tech Computer science

2023–Present

University of Engineering and Management, Jaipur

CGPA: 8.97 / 10

Minor Cybersecurity

2023–Present

University of Engineering and Management, Jaipur

CGPA: 8 / 10
